EDUCATION

University of California, Berkeley: *Master of Design (MDes)*

Incoming Class of 2027

University of California, Riverside: *Bachelor of Science in Computer Science*

Sept 2021 – June 2025

- Bourn's College of Engineering Student Ambassador

SKILLS

- **Creative Technology:** TouchDesigner, OpenCV, MediaPipe, DensePose, Arduino, Projection Mapping, Biometric Sensing, Interactive Media
- **Design Tools:** Figma, Framer, Adobe Creative Cloud (Photoshop, Illustrator), CapCut, Persona Mapping, Storyboarding, Wireframing, Rapid Prototyping
- **Technical Skills:** Python, C++, Java, JavaScript, React, Tailwind CSS, Node.js, OpenCV, MediaPipe, LLM Integration (OpenAI, Claude API), RAG, DensePose, SQL, Docker, Azure, GCP, AWS

SELECTED PROJECTS

ConneQ - MIT Media Lab AI-Hardware Hack-a-Thon

March 2026

- Developed a 1-to-1 system consisting of biometric sleeves to explore tactile communication with wearable tech
- Engineered an end-to-end pipeline that captures touch, motion, temperature, and voice data, cleaning and parsing inputs via an intermediate server to identify significant physiological shifts and output haptics aligned with biometric data
- Used LLM reasoning to perform sentiment analysis on biometric data and translate inputs into a "named emotion" and a corresponding vibration frequency

Second Skin - Fashion Projection Mapping

December 2025 - Present

- Designed and implemented a projection mapping system using OpenCV and TouchDesigner generative graphics
- Integrated MediaPipe for real-time human detection and landmark tracking to drive responsive visuals
- Built a multi-display pipeline enabling independent rendering for projector and laptop screens for live debugging and performance control
- Currently extending the system to incorporate DensePose on NVIDIA Jetson Nano using CUDA acceleration, enabling real-time 3D surface mapping of the human body for better projection alignment

AI Portfolio

July 2025 - August 2025

- Developed an AI chat bot for my portfolio using retrieval augmented generation and interactive design principles to explore how AI can represent personal identity
- Implemented OpenAI API for personalized, context-aware responses and deployed via Azure as a custom backend layer
- Deployed a React frontend with a cloud-hosted backend, managing and continuously maintaining full-stack delivery

EXPERIENCE

Software Engineer and Product Designer

February 2026 - Present

Syntrillo Tech - Virtual Health Care Platform

- Redesigning and implementing Provider Dashboard page through multiple design reviews and physician interviews
- Focusing on building an interactive platform for physicians to view patients' stroke risk health data and provide necessary treatments
- Refactoring stroke risk score calculation algorithm for efficiency and a better user experience in viewing contributors of the risk score

Software Engineer - AI Product Development

November 2025 - January 2026

Rezolve AI - AI Startup

- Scaled an AI-powered voice agent that automates IT support calls to handle multiple calls, multiple tenants, and enhance user experience for all callers
- Refined performance of agent by utilizing real-time speech understanding, workflow automation, LLM-based intent parsing, and backend ticketing systems for clients
